Introduction

Kafka et Spring Cloud Stream sont deux technologies puissantes et très utilisées dans le domaine de la gestion des flux de données en temps réel. Lorsqu'elles sont combinées, elles offrent une solution robuste et flexible pour la création, la gestion et le traitement de flux de données en toute simplicité. Kafka, en tant que système de messagerie distribué, permet de stocker et de diffuser des flux de données, tandis que Spring Cloud Stream, une extension du framework Spring, simplifie le développement d'applications orientées flux en fournissant un modèle de programmation abstrait.

L'intégration de Kafka avec Spring Cloud Stream offre un ensemble de fonctionnalités pour la création d'applications de traitement de flux de données de manière efficace. Cela permet aux développeurs de se concentrer sur la logique métier de leurs applications sans se soucier des complexités liées à la gestion des flux de données. Dans cette introduction, nous explorerons comment Kafka et Spring Cloud Stream se complètent mutuellement pour créer un écosystème de traitement de flux de données puissant et évolutif, et nous discuterons de certaines des utilisations courantes de cette combinaison dans le monde de l'informatique moderne.

INSTALLATION KAFKA :

Lien d'installation : https://www.apache.org/dyn/closer.cgi?path=/kafka/3.6.0/kafka_2.13-3.6.0.tgz

We suggest the following location for your download:

https://dlcdn.apache.org/kafka/3.6.0/kafka_2.13-3.6.0.tgz

Alternate download locations are suggested below.

It is essential that you [verify the integrity](#) of the downloaded file using the PGP signature (`.asc` file) or a hash (`.md5` or `.sha*` file).

HTTP

STEP 2: START THE KAFKA ENVIRONMENT

Kafka with ZooKeeper:

```
bin/zookeeper-server-start.sh config/zookeeper.properties
```

```
(base) nedday@MHP-de-Anas ~ % cd kafka_2.13-3.6.0 && bin/zookeeper-server-start.sh config/zookeeper.properties
```
